### Darwin's Theory of Evolution: Definition & Evidence | Live ...

Charles Darwin's theory of evolution by natural selection falls into this category, making Darwin one of the most important thinkers of modern times. He helped to transform how people thought about the natural world and humans' place within it. As with most ideas, however, Darwin's developed in a context.

---

### Darwin and the theory of evolution - The British Library

Darwin's Theory of Evolution: Definition Darwin defined evolution as a process of "descent with modification." He believed that some organisms within a species have trait variants that make them fitter and more likely to reproduce. Over time, inherited modified traits become dominant in the population, and a new species may emerge.

# Bookmark File PDF 1 Darwin Theory Of Evolution Answer Key

The English naturalist Charles Darwin (1809-1882) had developed the Darwinism theory in biological evolution and others, stating that through the natural selection of small, inherited variations that increase the individual's ability to compete, survive, and reproduce, all species of organisms arise and develop. This theory is also known as Theory of evolution.

## Charles Darwin Theory – Theory and Importance

These are the basic tenets of evolution by natural selection as defined by Darwin: More individuals are produced each generation than can survive. Phenotypic variation exists among individuals and the variation is heritable. Those individuals with heritable traits better suited to the environment ...

---

## Darwinism - Wikipedia

The theory of evolution by natural selection has also been adopted as a foundation for various ethical and social systems, such as social Darwinism, an idea that preceded the publication of *The Origin of Species*, popular in the 19th century, which holds that "the survival of the fittest" (a phrase coined in 1851 by Herbert Spencer, 8 years before Darwin published his theory of evolution ...

---

## Social effects of evolutionary theory - Wikipedia

Darwin and a scientific contemporary of his, Alfred Russel Wallace, proposed that evolution occurs because of a phenomenon called natural selection. In the theory of natural selection, organisms produce more offspring that are able to survive in their environment.

---

## Theory of Evolution | National Geographic Society

It was in the Galapagos islands where Charles Darwin was inspired to think of the theory of evolution. First, evolution started as a hypothesis. Years later, it became a theory. Charles Darwin stopped in 4 of the 16 Galapagos islands and observed finches.
