Reliability. The Euro IV engine versions had the serious problem with cracked pistons. It usually happens between 60-100k miles (100-150k km). That problem is characterized by the presence of black smoke, strong knocking noise, high crankcase pressure and loss of power. The problem was solved by installing reshaped pistons and new oil jets in 2014.

Other 1KD-FTV Engine Problems. In addition to the appearance of piston cracks, the 3.0 D-4D motors have other disadvantages. One of the typical malfunctions is the burn-out of o-rings made of copper and mounted on fuel nozzles. Owners pay attention to such a defect when white smoke appears at the time of starting the engine.

Toyota 1KD-FTV (3.0 D-4D) diesel engine: specs, review ...

Summary The 1KD engine has been sold in Australia for over 10 years, and has had a bumpy ride in terms of engine reliability. The first production of the engine is not affected by this issue as it featured a piston design which included a metal fibrous structure fused into the piston crown (as pictured).
