A type of animation that lets you split, duplicate, and blend animation clips to achieve the motion effects you want. Trax Nonlinear animation tool in Maya that gives you the ability to experiment with your animation sequences and character animations without have to redo all of your work when you want to modify or construct a different animation

*3D Animation practice Flashcards | Quizlet*

Stop motion animation is an animation technique to make a physically manipulated object appear to move on its own. The objects/puppets are made by the artist, and each time they are moved, the artist photographs them instead of drawing them. It was an important development because it allowed new types of special effects to be added to animation.
