I have a '99 Expedition with 5.4. I am losing a bit of coolant (it overheated one day) and it looks like there is a little oil or black goop (about a table spoon) in the coolant reservoir.

The oil looks fine as does the transmission fluid. The level on the tranny fluid is fine and the oil is about 1 / 2 qt. low. No puddles of

coolant under the truck.

Failure of the Fuel Pump Driver Module.

This problem is typical for the Ford F-150 with a 5.4 Triton engine.

Failure of the fuel pump driver module usually cuts off the petrol feed to the engine which, of course, causes the engine to turn off, thus cutting power to all essential systems.
