In Simple terms an electronic circuit is a closed pathway for electrons to flow. The Electric Current in a circuit flows from positive to negative while electrons flow from negative to positive. So when the switch is on the path is complete and electricity passes through enabling the bulb to light up, while when the switch is not on, there is a break in the flow of electricity and the bulb does not light up.

True, many lawyers believe that a longer introduction is better because it is read when the judge is paying the most attention. My response: I'd rather hit home a super-short introduction that still leaves some work for the judge to do—that is, to read the rest of my (concise) brief carefully and fully.
