In 1970s, adaptive critic designs (ACDs) were first introduced as effective tools to approximately solve the optimal control problems Werbos (1974), Widrow et al. (1973). The typical structure used in ACDs is the actor-critic architecture which consists of two networks: The actor network performs an action to the controlled system, and the critic network evaluates the value of that action and provides feedback information to the actor network.

Then, under the framework of adaptive critic designs, we use critic networks to solve the Hamilton-Jacobi-Bellman equations associated with auxiliary subsystem optimal control laws. The critic network weights are tuned through the gradient descent method combined with an additional stabilizing term.

Adaptive Critic Designs For Optimal Control Of Power Systems

Read PDF Adaptive Critic Designs For Optimal Control Of Power Systemssystem is solved via an adaptive critic design method. Adaptive critic design is also called adaptive dynamic programming (ADP). First, the operation of the air conditioning system is analyzed. Next, adaptive critic method is designed to realize the optimal control

Adaptive Critic Designs For Optimal Control Of Power Systems

In this paper, the optimal control scheme for ice storage air conditioning system is solved via an adaptive critic design method. Adaptive critic design is also called adaptive dynamic programming (ADP). First, the operation of the air conditioning system is analyzed. Next, adaptive critic method is designed to realize the optimal control for the air conditioning system. Numerical results show that using the data-based ADP optimal control method can reduce the operation costs.

Data-Based Adaptive Critic Designs for Nonlinear Robust Optimal Control With Uncertain Dynamics. Abstract: In this paper, the infinite-horizon robust optimal control problem for a class of continuous-time uncertain nonlinear systems is investigated by using data-based adaptive critic designs. The neural network identification scheme is combined with the traditional adaptive critic technique, in order to design the nonlinear robust optimal control under uncertain environment.

Data-Based Adaptive Critic Designs for Nonlinear Robust ...

Adaptive critic designs. Abstract: We discuss a variety of adaptive critic designs (ACDs) for neurocontrol. These are suitable for learning in noisy, nonlinear, and nonstationary environments. They have common roots as generalizations of dynamic programming for neural reinforcement learning approaches. Our discussion of these origins leads to an explanation of three design families: heuristic dynamic programming, dual heuristic programming, and globalized dual heuristic programming (GDHP).

areas of optimization and optimal control. Based on one of these modifications, we present a unified approach to all ACDs. This leads to a generalized training procedure for ACDs. Index Terms Adaptive critic design (ACD), backpropagation, control, DHP, dynamic programming, GDHP, HDP, heuristic

Adaptive Critic Designs

Adaptive critic designs can be used to solve nonlinear optimal control problems, without posing restrictions on the form of the dynamic equation or the controller a priori. By approximating the DP solution forward in time, they can learn the optimal control law both off and online. When plant dynamics and uncertainties are captured

Classical adaptive control proves total-system stability for control of linear plants, but only for plants meeting very restrictive assumptions. Approximate Dynamic Programming (ADP) has the potential, in principle, to ensure stability without such tight restrictions. It also offers nonlinear and neural extensions for optimal control, with empirically supported links to what is seen in the brain.
