Introduction to Advanced Computer NetworksLab. This course covers a set of advanced topics in computer networks. The focus is on principles, architectures, and protocols used in Page 12/43

modern networked systems. The goals of the course is to build basic networking and understanding of the tradeoffs and existing technology in building large, complex networked systems, and provide concrete experience of the challenges through a series of lab exercises.

Introduction. Research analysis manifests clear trends of growing interest of the Computer Science students towards e-learning. To keep this trend as well as the pace with the rapid advancement of software technologies, the "Advanced Network Technologies Virtual Lab" has been Page 35/43

developed. This lab exposes the students to various advanced topics including Wi-Fi, WiMAX, MANET, WSN, and encourages them to work on related problems in a partially constrained environment.
