### Multiple Choice Questions on Bryophytes - MCQ Biology -

Plantae includes algae, bryophytes, pteridophytes, gymnosperms and angiosperms. Fungi, and members of the Monera and Protista having cell walls have now been excluded from Plantae. So, the cyanobacteria that are also referred to as blue green algae are not [algae] any more. Algae [ Thallophytes

### Plant Kingdom - Thallophytes (Algae) - Bryophytes -

Cell walls of both algae and bryophytes are made up of cellulose. Both algae and bryophytes lack a vascular system. Both algae and bryophytes lack a vascular system. The main difference between algae and bryophytes is the division of the plant body; no division of labour is observed in the plant body of algae whereas the plant body of bryophytes internally divides into photosynthetic and storage zones.

### Difference Between Algae and Bryophytes | Definition -

According to apical cell theory by Nageli and Hofmeister, a single apical cell is the structural and functional unit of apical meristem. This theory is applicable only to some higher algae, bryophytes and pteridophytes. Thus, the correct answer is option D.

### Bryophyta Questions and Answers | Toppr

Answer The thallophytes (Thallophyta or Thallobionta) are a polyphyletic group of non-mobile organisms traditionally described as "thalloid plants", "relatively simple plants" or "lower plants". They were a defunct division of Kingdom Plantae that included fungus, lichens and algae and occasionally bryophytes, bacteria and the Myxomycota.
