Geographical Information Systems (GIS) are computerised systems for the collection, storage, analysis and presentation of geographical information in digital form. At their simplest, they are used to display and to interact with digital maps. However, there is more to GIS than mapping.

**An introduction to Geographical Information Systems (GIS)**

An Introduction to Geographical Information Systems is suitable for students of Geographical Information studies at all levels, from undergraduate to professionals retraining in GIS. 446 pp. Englisch. Seller Inventory # 9780273722595. More information about this seller | Contact this seller 27.

**0273722595 - An Introduction to Geographical Information -**

An Introduction to Geographical Information Systems is suitable for students of Geographical Information studies at all levels, from undergraduate to professionals retraining in GIS. Features A striking full-colour design enriches the photographs, maps, diagrams, and screenshots to provide a highly visual illustration of GIS output and applications;

**An Introduction to Geographical Information Systems, 4th -**

A Geographic Information System (GIS) is a set of tools for gathering, overseeing, and investigating information. It breaks down the spatial area and sorts out layers of data into representations utilizing maps and 3D scenes. GIS as a whole can be described as a system consisting of hundreds of tools in a single environment.

**An Introduction to Geographical Information Systems: A -**

This authoritative and widely adopted book is an up-to-date introduction to the world of Geographical Information Systems. It is an approachable and readable text for students at all levels, from undergraduates to professionals retraining in GIS. The book focuses on the practical applications of GIS, and considers how the technology works.

**An Introduction to Geographical Information Systems eBook -**

An Introduction to Geographical Information Systems is suitable for students of Geographical Information studies at all levels, from undergraduate to professionals retraining in GIS.

**An Introduction to Geographical Information Systems (4th -**

Introduction Geographical Information Systems (GIS) are computerised systems for the collection, storage, analysis and presentation of geographical information in digital form.

**An Introduction to Geographical Information Systems (GIS)**

A geographic information system (GIS) is a particular type of information technology that can help us understand and relate to the \what,\ \when,\ \how,\ and \why\ of the world by answering \where.\ Geographic information systems are indeed about maps, but they are also about much, much more.

**Introduction to Geographic Information Systems -**

A Geographical Information System is a collection of spatially referenced data (i.e. data that have locations attached to them) and the tools required to work with the data. Nowadays we normally associate the term with computers, but a (properly organized) set of file
