Anxiety - The Lancet

In a world of multiple and seemingly multiplying so-called anxiety disorders, it is no wonder that "anxiety" has become one of the most frequently used words in medical (and popular) discourse. But it was not always so; almost unimaginable to us now, there was once an English-speaking world without "anxiety"—or at least without our psychological concept of it.

Anxiety - The Lancet

Scores on anxiety were measured using the Generalised Anxiety Disorder assessment (range of scores: 0–21) and scores on depressive symptoms were measured using the Patient Health Questionnaire (range of scores: 0–27). On March 23, the first lockdown commenced in England. On May 10, it was announced that strict lockdown was being eased.

Trajectories of anxiety and depressive symptoms during

clinically useful, anxiety is a dimensional construct, and the distinction between what is normal and abnormal rests on clinical judgments of severity, frequency of occurrence, persistence over time, and degree of distress and impairment in functioning. *Lancet* 2016; 388: 3048–59 Published Online June 24, 2016 <http://dx.doi.org/10.1016/>

Anxiety - The Lancet

To our knowledge, this is the largest contemporary review of pharmacological agents for the treatment of generalised anxiety disorder by use of network analysis. There are several effective treatment choices for generalised anxiety disorder across classes of medication. The failure of initial pharmacological therapy might not be a reason to abandon a pharmacological treatment strategy.

Pharmacological treatments for generalised anxiety

The HR was greater for anxiety disorders than for mood disorders. The impact of COVID-19 on anxiety is in line with expectations and highlights the need for effective and accessible interventions. Our data show increased diagnoses in all major anxiety disorder categories, and it remains unclear whether post-COVID-19 anxiety will have a particular post-traumatic stress disorder-like picture.

Bidirectional associations between **- The Lancet Psychiatry**

Generalised anxiety disorder is a persistent and common disorder, in which the patient has unfocused worry and anxiety that is not connected to recent stressful events, although it can be aggravated by certain situations. This disorder is twice as common in women than it is in men. Generalised anxiety disorder is characterised by feelings of threat, restlessness, irritability, sleep ...
