Artificial Intelligence: Foundations of Computational Agents, second edition, Cambridge University Press 2017, is a book about the science of artificial intelligence (AI). It presents artificial intelligence as the study of the design of intelligent computational agents. The book is structured as a textbook, but it is accessible to a wide audience of professionals and researchers. In the last decades we have witnessed the emergence of artificial intelligence as a serious science and ...

There are many excellent free books on Python – but Artificial Intelligence: Foundations of Computational Agents is about a subject not commonly covered. I found the book useful as an introduction to Reinforcement Learning. As the title suggests, the book is about computational agents.

Artificial Intelligence: Foundations of Computational Agents is a book about the science of artificial intelligence (AI). AI is the study of the design of intelligent computational agents. The book is structured as a textbook but it is designed to be accessible to a wide audience. We wrote this book because we are excited about the emergence of AI as an integrated science.

This textbook for advanced undergraduate and first-year graduate students presents artificial intelligence (AI) using a coherent framework to study the design of intelligent computational agents. It summarizes the latest results and develops the science of AI together with its engineering applications, e.g. the online learning environment Alspace.

Imagine a classroom in the future where teachers are working alongside artificial intelligence partners to ensure no student gets left behind. The AI partner's careful monitoring picks up on a student in the back who has been quiet and still for the whole class and the AI partner prompts the teacher to engage the student. When called on, the student asks a question. The teacher clarifies the ...

~~Artificial Intelligence—Foundations of Computational Agents~~
Increasingly, artificial intelligence systems known as deep learning neural networks are used to inform decisions vital to human health and safety, such as in autonomous driving or medical diagnosis. These networks are good at recognizing patterns in large, complex datasets to aid in decision-making.
