## Atlas V Payload Users Guide

The Atlas V 500 payload fairing (PLF) is a derivative of the composite PLF currently used on the Ariane 5 vehicle. Two lengths of the 5-m PLF are available: the 5-m Short, which is 20.7-m (68-ft) long or the 5-m Medium, which is 23.4-m (77-ft) long.

can carry up to 24U CubeSats weighing 80 kg each. The Secondary Payload Adapter (ESPA Ring) is located between the upper stage and the primary payload and can accommodate 4-6 payload modules weighing up to 318 kg each.

Vulcan Centaur - ULA | United Launch Alliance  
The payload fairing (PLF) provides a controlled, safe environment for spacecraft during ascent. All ULA PLFs are configured for off-pad payload encapsulation, which enhances payload safety and security and minimizes on-pad time. Delta IV offers a 5-meter-diameter PLF, optimized for the configuration and mission need.

Vulcan Data Sheet

Atlas V is an expendable launch system and the fifth major version in the Atlas rocket family. It was originally designed by Lockheed Martin, now being operated by United Launch Alliance (ULA), a joint venture between Lockheed and Boeing.. Each Atlas V rocket consists of two main stages. The first stage is powered by a Russian RD-180 engine manufactured by RD Amross and burning kerosene and ...

Atlas V - Wikipedia

The Atlas V can fly in multiple configurations, but only one affects the way Centaur integrates with the booster and fairing: the 5.4 m (18 ft) diameter Atlas V payload fairing attaches to the booster and encapsulates the upper stage and payload, routing fairing-induced aerodynamic loads into the booster. If the 4 m (13 ft) diameter payload ...
