In basic terms, the immune system has two lines of defense: innate immunity and adaptive immunity. Innate immunity is the first immunological, non-specific (antigen-independent) mechanism for...

~~(PDF) An introduction to immunology and immunopathology~~

Bridges are a common feature of the built environment and one of the key elements of civil engineering. The basic principles of bridge design are dependent on the load-bearing structure; whether flat, convex or concave. These are better known as beam, arch or suspension bridges:

~~Bridge construction—Designing Buildings Wiki~~

Immunology is the study of the ways in which the body defends itself from infectious agents and other foreign substances in its environment. The immune system protect us from pathogens. It has the ability to discriminate (differentiate) between the individual`s own cells and harmful invading organisms. Immune system has two lines of defense: a.
