The technology at the heart of bitcoin and other virtual currencies, blockchain is an open, distributed ledger that can record transactions between two parties efficiently and in a verifiable and...

~~The Truth About Blockchain Harvard Business Review~~

Bitcoin transactions are seen by the entire network within a few seconds and are usually recorded into Bitcoin's worldwide ledger called the blockchain, in the next block. While it's possible that a transaction won't be confirmed in the next block, in the vast majority of circumstances it is fine to accept a transaction as soon as it has been seen by the network.

Bitcoin investors now fear that further regulation in Europe could have a negative impact on the price, which on January 20, 2013, 18-44 UTC was 13,103 USD, and on 01.01.2018 10-49 UTC dropped to 11,980 USD.

~~The whole truth about bitcoin Invest Acad~~

Cryptocurrencies such as bitcoin run on a technology called blockchain - essentially a huge online database of transactions. Blockchain's great strength is that it's considered unhackable. This is because rather than transactions being recorded on a traditional centralised database which someone could manipulate, they're recorded and updated in many locations simultaneously.

~~Beware this 'celebrity' bitcoin scam Which? News~~

What is Bitcoin? It's a network of nodes. Blockchain is a distributed ledger, where all transactions are stored by every member of the network. These operators are called nodes. You can compare them to servers running the internet. A Bitcoin network node is essentially a computer running the Bitcoin software.

~~What is Bitcoin? The Beginner's Guide~~

Blockchain (the company) was launched back in 2011. It's a Luxembourg-based enterprise that specializes in all things blockchain - the company provides Bitcoin data, statistics and other metrics, a wallet (the focus of today's guide) and blockchain exploration services.

Blockchain is one of the biggest buzzwords in technology today. But confusion exists about what it is exactly: The blockchain is often mentioned in the same breath as bitcoin and other cryptocurrencies, but it encompasses far more than that.

~~Why the Blockchain Ushers in a New Form of Trust ...~~

When it comes to the viability of cryptocurrencies like Bitcoin, you'll get a whole host of responses from people saying that it's either the technology of the future or a bigger grift than Star Citizen. And the truth is that both arguments are possibly right, with blockchain technology definitely being something which is still developing and has yet to realise its true potential whereas Bitcoin in its current implementation, is probably a bit of a flaky investment depending on your ...

Because Bitcoin was the first digital currency, the sector as a whole is often referred to as the Bitcoin industry. It now prefers to be called blockchain - after the technology which underpins...

~~Does Bitcoin still matter? BBC News~~

There is no blockchain. Often, bitcoin's transaction ledger is thought of as a public blockchain that lives somewhere in the cloud like a digital public square where all transactions are aggregated. However, there is no central source of truth; there are no oracles and there is no central public blockchain to which everyone independently commits transactions.

~~Bitcoin, Not Blockchain Unchained Capital~~

One of the most valuable attributes of blockchain technology is the way how "truth" is determined. Unlike centralized systems where truth emanates from the few central and influential figures, truth is determined through a consensus mechanism that is ideally participated by everyone. Bitcoin is a good example of this where Proof-of-Work and node participants help determine and distribute a single version of the truth, in bitcoin's case the record of transactions of bitcoin.
