Page caching refers to caching the content of a whole page on the server-side. Later when the same page is requested again, its content will be served from the cache instead of regenerating it from scratch. Page caching is supported by yii\filters\PageCache, an action filter. It can be used like the following in a controller class:

Caching: Page Caching | The Definitive Guide to Yii 2.0 ...

What is the Cache-Control Header. Cache-control is an HTTP

## Read PDF Cache Page Zer Guide Com Http Browse

header used to specify browser caching policies in both client requests and server responses. Policies include how a resource is cached, where it's cached and its maximum age before expiring (i.e., time to live). The cache-control header is broken up into directives, the most common of which are detailed below:

### What is Cache-Control and How HTTP Cache Headers Work

...

Checking a cached version of a page instead of the current live version is useful if the original page is unreachable due to an Internet congestion or if the website is down, overloaded or slow, or simply if the web page has been removed by the site owner. Cached pages are usually saved and stored by

overruled by requests with cookies. The value is the amount of time object(s) are to be kept in the cache, regardless of Cache-Control response headers from the origin server. Use the same time formats as pin-in-cache.

cache.config ¶ Apache Traffic Server 10.0.0 documentation  
Fragment caching refers to caching a fragment of a Web page. For example, if a page displays a summary of yearly sale in a table, you can store this table in cache to eliminate the time needed to generate this table for each request. Fragment caching is built on top of data caching. To use fragment caching, use the following construct in a view:

Caching: Fragment Caching | The Definitive Guide to Yii 2 ...
