In this lab we will configure GRE Tunnel between R1 & R2. Notice that in the topology below, R1 & R2 are not directly connect to each other. They are connected through R3 only. Basic interface configuration. R1 interface e0/0 ip address 192.168.13.1 255.255.255.0 no shut interface loopback0 ip address 1.1.1.1 255.255.255.255; R2 interface e0/0 ip address 192.168.23.2 255.255.255.0 no shut ...

[CCNA Training » GRE Tunnel Lab](#)

If we want to encrypt the packet inside GRE Tunnel we must use IPsec but it is out of CCNA scope so we will not mention here. When the GRE packet arrives at the other end of the tunnel (R2 in this case), the receiving router R2 needs to remove the GRE header and delivery header to get the original packet. Unlike VPN which does not support multicast, GRE tunnel does support multicast so many ...

[CCNA Training » GRE Tunnel Tutorial](#)

As you can see, the GRE tunnel configuration required for CCNA exam is pretty straightforward. At the minimum, you need only to configure the source, the destination of the tunnel and the IP address. However, the problems with GRE tunnels are very common and this is because they traverse domains that are not under your authority.
