Chapter 16 Evolution of Populations 16–1 Genes and Variation Darwin's original ideas can now be understood in genetic terms. Beginning with variation, we now know that traits are controlled by genes and that many genes have at least two forms, or alleles.

Chapter 16 Evolution of Populations Summary

CHAPTER 16 EVOLUTION OF POPULATIONS A. Darwin's Ideas revisited - it was more than 50 years after Darwin started to develop his theory of evolution before biologists could determine how evolution takes place - about 1910, biologists realized that genes carry the information that determine traits
