Contributors and Attributions. This chapter deals with the simplest form of curved motion, uniform circular motion, motion in a circular path at constant speed. Studying this topic illustrates most concepts associated with rotational motion and leads to the study of many new topics we group under the name rotation.

Nonuniform Circular Motion If an object is moving in a circular path but at varying speeds, it must have a tangential component to its acceleration as well as the radial one. This concept can be used for an object moving ... CHAPTER 5 CIRCULAR MOTION & GRAVITATION ...

162 CHAPTER 6 Circular Motion and Gravitation String breaks F rad S F rad S No net force now acts on the ball, so it obeys Newton's first law;it moves straight at constant velocity. A ball whirls on a string attached to a rotating peg in the center of a frictionless table (viewed from above).

CHAPTER 6 | UNIFORM CIRCULAR MOTION AND GRAVITATION 187 Introduction to Uniform Circular Motion and Gravitation Many motions, such as the arc of a bird's flight or Earth's path around the Sun, are curved. Recall that Newton's first law tells us that motion is along a straight line at constant speed unless there is a net external force.

The acceleration which gives rise to a circular motion is called the centripetal acceleration. Its magnitude is given by. It is directed towards the center of the circular motion and is perpendicular to the instantaneous velocity of the object. 6.2 || Newton's law of gravitation. Newton's law of gravitation

In this chapter you will learn about gravitation and centre of gravity. Uniform circular motion Activity-1 Observing the motion of an object moving in a circular path Take an electric motor and fix a disc to the shaft of the electric motor. Place a small wooden block on the disc at the edge as shown in figure 1 (a).

Newton's laws of motion and kinematic principles are applied to describe and explain the motion of objects moving in circles; specific applications are made to roller coasters and athletics. Newton's Universal Law of Gravitation is then presented and utilized to explain the circular and elliptical motion of planets and satellites.
