Assessing risks associated with gases and vapours (INFO-RA2-4) Land contamination can give rise to volatile contaminants which can pose a risk of harm to human health by asphyxiation or illness if inhaled. Vapours and gases such as methane may also pose a risk of fire or explosion.

Assessing risks associated with gases and vapours (INFO-RA2-4)

Bomb Risk satisfies CIRIA C681's guidelines for dealing with UXO risk. Unexploded ordnance (UXO) risk management is a key part of the planning process for any construction, development or infrastructure project in the UK. CIRIA C681 UXO guidelines set out four stages for managing this risk. The chart, below, gives a brief overview of the four stages, and poses questions that need to be answered in order to progress through the UXO risk management process.

Read Book Ciria Guidelines CIRIA This publication provides guidelines on good practice for the condition appraisal, maintenance and remedial treatment of transportation infrastructure drainage, as well as advice on issues such as inspection, investigation and monitoring, asset management, health and safety and environmental issues.

Ciria Guidelines - legend.kingsbountygame.com

Where deeper and larger components are required, e.g. regional water features in recreational areas or parks, it is recommended that a level bench should be provided at a depth of 0.6m prior to descent to a maximum depth of 1.5m, at a maximum gradient of 1 in 2.5. It is considered that a reasonable minimum width is 1.5m.
