Coming to CNC machining at this point in time is interesting, and mirrors the challenge in coming to computing or any high technology now. CNC is, arguably, one of the technologies still accessible to ordinary mortals, while much of the computing-related technology in other fields is barely accessible at the detailed level.

12:11:46: . Hi Philip. You could make the part on a conventional mill with the aid of a rotary table and internal radiused cutter but would involve a number of set-ups, with cnc the blank material could be drilled and counterbored then screwed down to a sub-plate to allow the rest of the part to be completed with 1 further set-up on a cnc machine.
