that reason, component-based and product line approaches have been adapted to the software development in order to improve the development process, exploit reusability and decrease cost and time as well as business goals [29]. The main idea of Component-based software development (CBSD) is creating a

COMPONENT-BASED SOFTWARE PRODUCT LINE ENGINEERING

The KobrA (Komponentbasierte Anwendungsentwicklung) method that has been developed by Fraunhofer Institute Experimental Software Engineering (IESE). It is a component-based software product line ...

Component-Based Product Line Engineering with UML ...

The product line and component-based approaches to software engineering both hold the potential to significantly increase the level of reuse in industrial software development and maintenance. They also have complementary strengths, since they address the problem of reuse at opposite ends of the granularity spectrum; product line development essentially supports “ reuse in the large ” while component based development supports “ reuse in the small. ” .

Component-Based Product Line Development: The KobrA ...

At one end of the granularity spectrum, components represent reusable software building blocks that can be quickly and easily assembled into new systems, while at the other end of the spectrum product line engineering consolidates all the common parts of an organization's range of products within a single, highly reusable software core.

as a faster, more flexible way of building systems that can easily be adapted to meet rapidly-changing business needs and integrate legacy and new applications (e.g. Forrester report in June 1998 predicted that by 2001 "half of packaged apps vendors will ...

Component-based product line engineering with Uml ...

Product line engineering is characterized by the idea of analyzing and explicitly capturing the commonalities and variabilities among different members of a product family. Component-based development is characterized at the analysis and design levels by ì localized î development artifacts (e.g. UML diagrams) focussed on the description of individual logical abstractions (i.e. components).

Component-Based Product Line Engineering with UML ...

The product line and component-based approaches to software engineering both hold the potential to significantly increase the level of reuse in industrial software development and maintenance.

(PDF) Component-Based Product Line Development: The KobrA ...

In this position paper we argue that the best way to achieve these aims is to integrate the principles of component-based development (CBD) with the model driven architecture (MDA) and product line engineering (PLE) paradigms, and briefly describe how this is achieved in the KobrA method

Model-driven component-based product line engineering. A ...

The first part of the book motivates the use of components, design patterns, and product line engineering in order to improve the software development process. The proposed methodology has its roots in object-oriented methods (such as OMT, Fusion, and ROOM), component-oriented methods (Catalysis, Select Perspective, and UML Components), and product line-oriented methods (FODA, FAST, and PuLSE, in particular).

Amazon.com: Customer reviews: Component-Based Product Line ...

SysML, Product Line Engineering, the Object Variability Modeling and the Reusable Asset Specification provide Model -Based Product Line Engineering (MB -PLE). Enables the asset reuse while making value- based decisions on system configuration. Provides a demonstrable ROI that will reduce development time and

Model-Base Product Line Engineering

Software product line engineering is an approach to cost-efficiently derive tailored products to markets and customers, utilizing common components and services in a planned manner. Product lines have been applied to other engineering fields for decades, while being quite recently introduced in software engineering.

Product Line Engineering - an overview | ScienceDirect Topics

Read Online Component Based Product Line Engineering With Uml Component Based Development Series

This paper describes a new approach for Component- Based Product Lines engineering focusing on the Component-Based specification of the Product Line architecture. The aim is to overcome the shortcomings of traditional product lines by unifying the strengths of two complementary approaches, and to facilitate the derivation process since applications will be produced by the simple composition of existing components.

Component-Based Specification of Software Product Line ...

Component-based product line engineering with UML by Colin Atkinson, 9780201737912, available at Book Depository with free delivery worldwide.

Component-based product line engineering with UML : Colin ...

Component-based software engineering, also called components-based development, is a branch of software engineering that emphasizes the separation of concerns with respect to the wide-ranging functionality available throughout a given software system. It is a reuse-based approach to defining, implementing and composing loosely coupled independent components into systems. This practice aims to bring about an equally wide-ranging degree of benefits in both the short-term and the long-term for the
