Kurose and Ross
manage to convey
the principles
of computer
networking
(often

considered "dry" material) in a technically precise yet entertaining way. A good measure of humorous bits and off-the-cuff remarks are sprinkled throughout the text, making the reading fun

(students love it).

Computer Networking: A Top-down Approach Featuring the

...

Focusing on the Internet and the fundamentally important issues of networking,

this text provides an excellent foundation for students in computer science and electrical engineering, without requiring extensive knowledge of programming or mathematics.

This can be done in simulated scenarios or in a "real" network environment such as the Internet. The Java applets in the textbook Web site take the first approach. In these Wireshark

labs, we'll take the latter approach. You'll be running various network applications in different scenarios using a computer on your desk, at home, or in a lab.
