Enzyme Cut-outs Activity

The process of combination of two molecules with the elimination of water molecule is called dehydration synthesis. This is because the term dehydration is used for "losing water"

Download Ebook Dehydration Synthesis

Dehydration synthesis represents the formation of the new substance, therefore, dehydration synthesis is the elimination of water with the formation of new compounds. Definitely combination of two molecules will form a large compound and water molecule will eliminate and form as a by-product

THE CHEMICAL BUILDING BLOCKS
OF LIFE Activities

Activity 2.2.3: The Biochemistry of
Food The dehydration synthesis
occurs when polymers and monomers
are formed. In dehydration synthesis

Download Ebook Dehydration Synthesis

Water is released when polymers are being formed. When polymers are broken apart hydrolysis is used. The water is then put back into the molecule. This is the reason why one must consume water.
