Water-dispersible granule formulation containing 54% w/w Bacillus thuringiensis.

Dipel DF - Nufarm UK

Bacillus thuringiensis (or Bt) is a Gram-positive, soil-dwelling bacterium, commonly used as a biological pesticide. B. thuringiensis also occurs naturally in the gut of caterpillars of various types of moths and butterflies, as well on leaf surfaces, aquatic environments, animal feces, insect-rich environments, and flour mills and grain-storage facilities.

Bacillus thuringiensis - Wikipedia

Bacillus thuringiensis, from an environmental point of view, is a sporogenic bacterium that normally lives in the soil. The commercial formulations contain spores and protein crystals of the bacterium, which, sprayed on the leaf surfaces, are ingested by the larval stages of sensitive insects (mainly lepidoptera).

Dipel Bacillus Thuringiensis Kurstaki Insecticide ...

Reviews Dipel DF is a natural, biological insecticide to control caterpillars in vegetables, soft fruit, ornamentals, box hedging (buxus), trees, forestry and amenity vegetation. Also effective on Brown Tail Moth and Oak Processionary Moth. Progreen also exclusively market an alternative product in 0.5 and 1Kg packs - see Bruco

DiPel DF 500 g | Insecticide | Caterpillars | Brown Tail ...

DiPel DF is compatible with most commonly used insecticides and fungicides. Do NOT apply as a tank mix with, or within 2 days of application of alkaline products such as foliar nutrients, liquid fertilisers or Bordeaux mixture. If mixing with cupric hydroxide use immediately. Do not allow mixture to stand.

Dipel DF Label - Nufarm

Dipel DF is a water dispersible, granular biological insecticide used for the control of caterpillars in vegetables, soft fruit, ornamentals and amenity vegetation. Dipel is also effective on Brown Tail Moths.

Dipel DF 500g Biological Insecticide For Caterpillar ...

Special target organ effects: Bacillus thuringiensis subsp. kurstaki For a formulation of the active ingredient in toxicity studies with rats and sheep, no significant treatment-related effects were observed.

SAFETY DATA SHEET: DiPel® DF

Bacillus thuringiensis is commonly eaten by insect larvae. After it has been ingested, the toxins activate inside the gut. Here, it breaks down and causes infection and later, starvation. Depending on the type of Bt and the insect, it can take a few hours or a few days for the insect to die.

What is Bacillus Thuringiensis (Bt) and Should You Use It ...

Yates Nature's Way Caterpillar Killer - Dipel Yates Nature 's Way Caterpillar Killer is based on Bacillus thuringiensis var. kurstaki, which is an insecticide derived from beneficial bacteria found in soil, on plant surfaces and also in insects. It specifically targets caterpillars and is safe for beneficial insects such as ladybirds and bees.

DiPel SC - Sumitomo Chem

Nature ' s Way Caterpillar Killer Dipel is the only certified organic caterpillar control product which can be used on edibles (herbs, vegetables and fruits) and ornamentals. The natural solution effectively controls a wide range of leaf-eating caterpillars and there is no withholding period – edibles can be eaten straight away.

Yates 40g Natures Way Caterpillar Killer Dipel Insecticide

Bacillus thuringiensis is a bacterium. During its replication it generates spores and a so-called crystal protein that is lethal to the moth larvae in which it is replicating. I ' ll return to the spores later ... these are a thermally and environmentally stable form of the bacterium, protected by a thick cell wall.
