The format, familiar to readers and owners of previous editions, includes the grouping of drugs by class (e.g. `Beta-blocking agents') where possible and by indication (e.g. `Antihypertensives' or `Acute and chronic heart failure') where more appropriate. The final chapter, `Which therapy for which condition', then provides a summary.

Drugs For The Heart Paperback

The novel oral anticoagulants (NOACs) are a new class of anticoagulant drug. They can be used in the prevention of stroke for people with non-valvular AF, which is when AF is not associated with a problem in a heart valve. They can also be used in the management of venous thromboembolism, which is when a blood clot forms in a vein.

Most modern drugs are created in the lab – but some have unusual or downright bizarre origins, as Rick Karsan explains. 1. ACE Inhibitors. ACE inhibitors are a frequently used class of drugs in heart medicine, used to treat high blood pressure and heart failure, and often prescribed following a heart attack. One common example is ramipril.

Drugs for the Heart: Expert Consult - Online and Print ...

Of note, myocardial ejection fraction is better preserved by timely revascularization than that of a necrotic, scarred, non-reperfused heart muscle. Drugs that are commonly used today such as aspirin, statins, and angiotensin-converting enzyme (ACE) inhibitors, independent of their blood pressure and cholesterol reducing effects, provide several protective effects on the endothelium of the coronary artery, resulting in a reduction of atherosclerosis progression and plaque stabilization.
