Methods and results: In laboratory media, MICs of 15, 75 and 35 mmol I (-1) vanillin were established for E. coli, Lact. plantarum and L. innocua, respectively. The observed inhibition was found to be bacteriostatic. Exposure to 10-40 mmol I (-1) vanillin inhibited respiration of E. coli and L. innocua. Addition of 50-70 mmol I (-1)
