A VIN number is a sequence of 17 number and letters that when decoded provide quite a bit of information about a vehicle. When read from left to right. WMI(World Manufacturer Identifier) is contained in the first 3 digits. Position 1: What continent your vehicle was made on. Position 2: What country. Position 3: What type of vehicle,

Vehicle specification information by VIN lookup - Motor ...

The VIN number of a vehicle is a 17-character alphanumeric code that contains information about the vehicle, such as who manufactured it, where and when it was made, the body type, and much more. No two VIN numbers are alike. Each VIN uniquely identifies the vehicle it was assigned to, which is why they are often used by law enforcement to track down stolen autos. VIN numbers can also be used by the general public to find the specs on any vehicle.

Free VIN and Vehicle History Check.

A vehicle identification number (VIN) contains a lot of information about the automobile it is assigned to. The industry began standardising VINs in 1981 so that the sequencing would become more uniform. While there are still variations among manufacturers, what has evolved is a 17-character code that is uniquely assigned to every automobile.

Free VIN Lookup - Vehicle VIN Decoder & Info ...

A vehicle identification number is a unique cryptogram for identifying a specific automobile. Basically, it is like a vehicle's fingerprint since no two vehicles can share the same vehicle identification number. The VIN is a composition of 17 characters (capital letters and digits) that serves as a unique identifier for each vehicle. However, it doesn't include letters I, O and Q. The VIN shows the unique specifications, features, and manufacturer of each vehicle.
