Some types of finite element methods (conforming, nonconforming, mixed finite element methods) are particular cases of the gradient discretization method (GDM). Hence the convergence properties of the GDM, which are established for a series of problems (linear and non-linear elliptic problems, linear, nonlinear, and degenerate parabolic ...

Here is our finite element idealization, once again. And the next step now is to read in also the coordinates of all the elements and the temperatures at the nodal points. Now with this coordinate system, x, y, and z, as shown here, the coordinate of all of these nodal points can be read indirectly.

1. Introduction. The development of the finite element method follows the development of Weighted Residual methods and the Ritz method or it can simply be said that the finite element method is the extension of these two analysis approaches .The procedure of these approaches first of all assumes a solution satisfying the boundary conditions of the differential equations.
