Holt Chemistry Bonds Compounds Concept Review Answers ...

Concept Review: Covalent Bonds 1. A covalent bond forms when two or more valence electrons are attracted by the positively charged nuclei of two atoms and thus are shared between both atoms. 2. The H₂ molecule is stable because each hydrogen atom now has a shared pair of electrons and has achieved a stable noble gas configuration. 3.

1. Use the concept of potential energy to describe how a covalent bond forms between two atoms. As the atoms involved in the formation of a covalent bond approach each other, the electron-proton attraction is stronger than the electron-electron and proton-proton repulsions. The atoms are drawn to each other and their potential energy decreases.

Holt Chemistry Covalent Review Answers | liceolefilandiere

A covalent bond, where the electrons are shared equally is called a nonpolar bond (eg H – H) and an unequal sharing of the pair of bonding electrons results in a polar bond. The unequal sharing of electrons is due to the ability of an atom to attract electrons towards itself which is known as Electronegativity.
