Most dishwashers are equipped with a water stop, making the program stop immediately when the door is opened and meaning no water will come out. With some models this can cause problems over time. With built-in dishwashers it is possible that frequently opening the dishwasher while running may cause water damage to surrounding cabinets because of the steam that is released.

How a Dishwasher Works A dishwasher doesn ' t fill like a clothes washer. Instead, 2 to 3 gallons of water flood the lower portion of the tub, where it mixes with the detergent and is pumped through the rotating spray arms onto the dishes. The wash water drains and is replaced by fresh water to rinse the dishes.
