The Cell and Its Amazing Ability to Renew Itself. The most fundamental unit of the human body is the cell. All human life originally begins as one single cell, which then divides into many more cells, until a baby is born after nine months of cell division inside the mother's uterus. Every second that we're alive, the cells in our bodies are endlessly working to bring us back to a natural state of homeostasis or equilibrium.

The Human Body's Ability to Self-Heal

Minor wounds often heal easily, but all wounds need care to prevent infection. Stages of Wound Healing. Wounds heal in stages. The smaller the wound, the quicker it will heal. ... Once the scab forms, your body's immune system starts to protect the wound from infection. The wound becomes slightly swollen, red or pink, and tender.

How wounds heal: MedlinePlus Medical Encyclopedia

Within 48 hours, your taste and smell receptors will start to heal, shifting from their abnormally flattened state to a more normal, rounded configuration. Damaged nerve cells will also self-repair as the insulating membrane, called myelin, gradually rebuilds itself around exposed nerve endings.

How Your Body Heals After You Quit Smoking

In general, the body's natural healing process has several basic steps: The brain receives information that an injury has occurred. It orders other body systems to produce chemicals and other things needed to heal the injury. The bloodstream transports the items required for healing to the site of the injury.

Body's Natural Healing Powers | Lung Health Institute
