Then, pass these batches sequentially to the function

`elmo_vectors ( )`. I will keep these batches in a list: `list_train =`

`[train [i:i+100] for i in range (0,train.shape [0],100)]` `list_test =`

`[test [i:i+100] for i in range (0,test.shape [0],100)]` Now, we will

iterate through these batches and extract the ELMO vectors.

Here is a detailed procedure for setting up theElmo projector:

1. Switch on the power cord of the Elmo and connect it to the RGB cord of the projector.
2. Project both Elmo and projector into the wall.
3. Switch on the power button of both Elmo and projector. They will give green lights. It is ready ...

*Elmo Projector: How to Use*

Developed in 2018 by AllenNLP, ELMO it goes beyond

traditional embedding techniques. It uses a deep, bi-directional LSTM model to create word representations.

Rather than a dictionary of words and their corresponding

vectors, ELMO analyses words within the context that they are

used.

Using ELMo interactively# You can use ELMo interactively (or programatically) with iPython. The `allennlp.commands.elmo.ElmoEmbedder` class provides the easiest way to process one or many sentences with ELMo, but it returns numpy arrays so it is meant for use as a standalone command and not within a larger model. For example, if you would like to learn a weighted average of the ELMo vectors then you need to use `allennlp.modules.elmo.Elmo` instead.

This notebook presents a brief demonstration on how to integrate Elmo Embeddings from tensorflow hub into a custom Keras layer that can be directly integrated into a Keras or tensorflow model. A similar process can be utilized for additional tf-hub models for easy integration of state of the art pre-trained models into your custom workflows.

*GitHub - strongio/keras-elmo: How to use ELMo embeddings ...*

Elmo does have word embeddings, which are built up from character convolutions. However, when Elmo is used in downstream tasks, a contextual representation of each word is used which relies on the other words in the sentence. Elmo does not produce sentence embeddings, rather it produces embeddings per word "conditioned" on the context.

## *How to Capture Images and Video with the Elmo*

Instead of using a fixed embedding for each word, ELMO looks at the entire sentence before assigning each word in it an embedding. It uses a bi-directional LSTM trained on a specific task to be able to create those embeddings. ELMO provided a significant step towards pre-training in the context of NLP.
