I Can Save the Ocean!: The Little Green Monster Cleans Up ...

Reduce your carbon emissions. In the last half-century, the ocean has absorbed 90% of the excess heat created by burning fossil fuels. That's led to warmer waters, which can affect where fish swim, bleach coral reefs, change how marine species reproduce, speed up sea-level rise, and even alter weather events on land.

Save the Ocean Children's Animated Audiobook - YouTube

Carbon dioxide from burning fossil fuels is making our oceans more acidic. One consequence could be the loss of corals on a global scale, as their calcium skeletons are weakened by the increasing acidity of the water. There are many simple ways you can reduce your energy use. Ride a bike, walk or use public transportation.

10 Things You Can Do to Save the Oceans

Conserve water. The less water you use, the less runoff and wastewater that will eventually find its way back into the ocean. Volunteer in local beach or reef cleanups. If you don't live near the coast, get involved in protecting your watershed. Become an informed consumer and learn how your daily choices such as water use, recycling, seafood, vacation spots, fertilizer use, and driving times can positively (or negatively) impact the health of coral reefs.
