Infection and Immunity ® (IAI) reports key discoveries that help microbiologists, immunologists, epidemiologists, pathologists, and clinicians to gain new insights into the underlying mechanisms of host-pathogen interactions and develop novel strategies to prevent or treat infectious diseases.

~~Home | Infection and Immunity~~

Covers the foundation concepts of immunology and their application to the real world of diseases and health. •

Examines the basic molecular and cellular components of the immune system relative to the pathogenesis and prevention of infectious diseases.

This textbook describes the basic molecular and cellular components of the immune system, the pathogenesis and prevention of infectious diseases, and common immune system dysfunctions. Topics of the 27 chapters include antibodies, the major histocompatibility complex, antigen processing, the T-cell receptor, vaccines, AIDS, and transplantation immunology.

"For people who have caught the flu, their pre-existing immunity may make them susceptible to infection or increase the severity of their influenza symptoms if their antibodies are targeting 'bad ...

~~Pre-existing flu immunity impacts antibody quality ...~~

This research can help provide insight into how pre-existing immunity affects the production of antibodies after infection and vaccination. Universal vaccines would have to use parts of the flu virus that stay the same over time, or are conserved, so that antibodies will work against the virus as the rest of it

Infection and Immunity – An overview. The ASI Infection and Immunity Special Interest Group was established in 2009 by Dr. Ashley Mansell (Monash Institute for Medical Research), with the aim of providing a forum for ASI researchers who have a special interest in infectious diseases. The I&I SIG organizes a one-day workshop on the Sunday of each national ASI Annual Scientific Meeting, with the primary objectives of providing speaking opportunities to early career researchers (PhD students, ...

Abstract. Experimental evidence in the last decades show that iron is a fundamental element for normal development of the immune system. Its deficiency affects the capacity to have an adequate immune response. The role of iron in immunity is necessary for immune cells proliferation and maturation, particularly lymphocytes, associated with the generation of a specific response to infection.
