Grammatically, it is a complete sentence, written in mathematical symbols, with a subject ( $x$ ) and a predicate (is greater than 10). But the sentence is neither true nor false, since the value of  $x$  isn't specified. If  $x = 11$ , then  $x > 10$ . This is a TRUE statement.

This is hands down the best introduction to logic and mathematical reasoning in my current library. I highly recommend this to anyone who needs to learn the basics of mathematical proofs because the author takes great care to motivate each concept with plenty of down to earth examples.

~~An Introduction to Mathematical Reasoning: Numbers, Sets ...~~

This book eases students into the rigors of university mathematics. The emphasis is on understanding and constructing proofs and writing clear mathematics. The author achieves this by exploring set theory, combinatorics, and number theory, topics that include many fundamental ideas and may not be a part of a young mathematician's toolkit.
