Programmable Logic Controllers
The programmable logic
controller, or PLC, is ubiquitous in
process and manufacturing
industries today. Initially built to
replace electromechanical relay
systems, the PLC offers a simpler
solution for modifying the

Introduction to Programmable Logic Controllers (PLC ...

A Programmable Logic Controller (PLC) is a device that is capable of being programmed to perform control functions. The first PLC was introduced in the late 1960s to replace relay logic controls in the automotive industry.

Understanding a Programming Logic Controller (PLC) PLC stands for Programmable Logic Controllers. They are basically used to control automated systems in industries. They are one of the most advanced and simplest forms of control systems which are now replacing hard-wired logic relays at a large scale.
