Is A Mushroom Decomposer

Mushrooms and other fungi fill the roles of primary decomposers in an ecosystem, helping to break down dead or decaying organisms before secondary decomposers, such as insects, can finish the job. The part of the mushroom most people are familiar with, the fruiting body, is just a small portion of a much larger underground network, or mycelium, of microscopic root-like structures known as hyphae.

BackyardDigs

Mushrooms are decomposers because like other fungi, they are heterotrophs, meaning they break down dead and decaying matter to make their own food. Mushrooms make a network of mycelium that extends deep into the soil to decompose dead matter with their special enzymes, recycling nutrients and making them available for plants.
