Manual J Residential

Load Calculation

Cooling Load

Calculation Example.

To calculate the

estimated HVAC load

for a house with

2,500 square feet, 12

# File Type PDF Manual J

windows, and 3 exterior doors occupied by 4 people, simply plug it into this formula:  $2,500 \times 25 = 62,500$  base BTU.  $4 \text{ people} \times 400 = 1,600$ .  $12 \text{ windows} \times 1,000 = 12,000$ .  $3 \text{ exterior doors} \times 1,000 = 3,000$ .

# File Type PDF Manual J

Calculator - Manual J  
| ServiceTitan

A load calculation program based on Manual J, designed to be quick and easy to use. It calculates the amount of heating and cooling BTU's needed for the whole house (Block Load) or a room by room load. Select a State or Province; afterwards

File Type PDF

Manual J

you will then be given  
a choice of cities,  
airports or other  
major locations.

Manual J: Residential  
load calculation

# File Type PDF Manual J

Manual J is the protocol used for determining the amount of heating and cooling that a home requires to keep its occupants warm in the heating months and cool and dry in the cooling months.

# File Type PDF Manual J

and Manual S: Why  
Your HVAC Tech  
Must ...

On the horizontal axis, I plotted the conditioned floor area, in square feet. On the vertical axis, I plotted the cooling load divided by the floor area, or square feet per ton.

Remember, when HVAC contractors use

# File Type PDF Manual J

rules of thumb to size air conditioners, they usually pick a number between 400 and 600 square feet per ton.
