Mathematical Economics Practice Problems and
Solutions - Second Edition - G. Stolyarov II. 11. We
first find the intersection of $x + y = 100$ and $x + 2y = 140$,
which occurs at $x = 100 - y = 140 - 2y$, which
means that $y = 40$ and $x = 60$. At $x = 60, y = 40$,
 $a \cdot \ln(x) + b \cdot \ln(y) = 4.094344562a + 3.688879454b$.

Formula to calculate value of TC. corresponding to value of q in cell A4 and parameter values in cells F4, F5, F6 and F7.

Basic Mathematics for Economists

Objectives of Math for Economists

- To study economic problems with the formal tools of math.
- To understand mathematical economics problems by stating the unknown, the data and the restrictions/conditions.
- To plan solutions to these problems by finding a connection between the data and the unknown
