There are 2 ways in which the tapered sections can be modeled in midas civil: 1. Tapered section tab: We can define the tapered section in the tapered tab of the section definition. 2. PSC Bridge Wizard: The PSC bridge wizard is a robust and easy method of making the tapered sections in midas civil.

This type of superstructure is generally used for spans
between 20 to 40 m. Majority of prestress concrete bridges,
constructed in India are post tension type. The span to depth
ratio is usually kept as 20 for simply supported spans and 25
for continuous spans. The girder spacing of 2 to 3 m.

The PSC box girder in the webinar. A type of superstructure for the transverse analysis is Prestressed Concrete Box Girder. This girder was modeled with plate elements. In order to consider all conditions around the structure, various features in midas Civil were used. The conditions are shown in the figure below.

Prestress Box Girder Bridge Analysis and Design for Australian Engineers – Midas Civil. It features optimal design solution functions that can account for construction stages and time dependent properties. Its highly developed modeling and analysis functions enable engineers to overcome common challenges and inefficiencies of finite element analysis.

Midas Civil Bridge Design Tutorial - Maharashtra

Hi, I am Suman Dhara, currently with Midas IT as Sr. Structural Engineer. midas Civil is one of the best Bridge Analysis Program. Once an user gains command over the software, it is as flexible as one wishes to use the software. With this course the engineer can have a first hand experience and appreciate the real benefits of midas Civil.
