Ccie V5 Guide

An MPLS network is commonly a backbone network comprised of MPLS-enabled routers called Label Switch Routers (LSR).

Generally, the network consists of a core LSR with an edge LSR that applies labels to packets. This is the setup mechanism of an

MPLS Configuration Lab - The Routing Table

MPLS is best summarized as a “Layer 2.5 networking protocol”. In the traditional OSI model: Layer 2 covers protocols like Ethernet and SONET, which can carry IP packets, but only over simple LANs

Read PDF Mpls For Cisco

or point-to-point WANs.

Layer 3 covers Internet-wide addressing and routing using IP protocols.
