The lateral epicondyle is the origin of the extensor muscle mass or the common extensor tendon. On the posterior elbow, the olecranon process of the ulna is noted and is most obvious with the elbow flexed at 90 degrees.

### Physical Examination of the Elbow | Musculoskeletal Key

Examination of the elbow begins with a thorough history of the presenting complaint. If a specific traumatic episode has occurred, an attempt should be made to define the mechanism of injury as accurately as possible. Such information often suggests subtle diagnoses or patterns of injury that may involve anatomic areas other than the elbow itself.
