(a) A sealed bottle of pop is a dynamic equilibrium because the rate of conversion between carbon dioxide and carbonic acid is equal in both directions in the closed system. (b) When I open the pop bottle, carbon dioxide leaves the bottle, so the equilibrium conditions no longer exist and a new equilibrium must form between the pop and the atmosphere.

Chapter 1, Organic Compounds, introduces the historical concept of organic compounds as those compounds produced by living things. Students then learn that the current concept of organic chemistry is the study of carbon compounds. Each section of the chapter addresses a different group of organic compounds, related by structure.
