chemists will be taken as self evident. This course will always use the same approach. We will first start with something familiar - such as multiplets we commonly see in proton NMR spectra - and then go deeper

into the explanation behind
this, introducing along the
way new ideas and new
concepts.

nuclear magnetic resonance spectroscopy, commonly referred to as nmr, has become the preeminent technique for determining the structure of organic compounds. Of all the spectroscopic methods, it is

the only one for which a complete analysis and interpretation of the entire spectrum is normally expected.

Definition of NMR: (1)
Nuclear magnetic resonance
is defined as a condition
when the frequency of the
rotating magnetic field
becomes equal to the
frequency of the processing
nucleus. ADVERTISEMENTS: (2)

If ratio frequency energy
and a, magnetic field are
simultaneously applied to
the nucleus, a condition as
given by the equation $\nu = \frac{\gamma H_0}{2\pi}$ is met.
