Drilling engineering is a subset of petroleum engineering. Drilling engineers design and implement procedures to drill wells as safely and economically as possible. They work closely with the drilling contractor, service contractors, and compliance personnel, as well as with geologists and other technical specialists. The drilling engineer has the responsibility for ensuring that costs are minimized while getting information to evaluate the formations penetrated, protecting the health

~~Drilling engineering - Wikipedia~~

In the oil production wells and water injection wells of the Huzhan oil field, acidizing was ineffective in removing blocking caused by bacterial slime, organic matter in the drilling fluid system, and organic gel in oil production wells and water injection wells; thus, the ClO₂ system was used as blocking remover.

~~Oil Well Drilling Engineering Principles Practice By H Rabia~~

The production curve of a well shows the amount of oil produced per unit of time for several consecutive periods; if the conditions affecting the rate of production are not changed by outside influences, the curve will be fairly regular, and, if projected, will furnish useful knowledge as to the future production of the well.

~~Oil well drilling engineering h. rabia pdf~~ BitBin

The earliest known oil wells were drilled in China in 347 CE. These wells had depths of up to about 240 metres (790 ft) and were drilled using bits attached to bamboo poles. The oil was burned to evaporate brine and produce salt. By the 10th century, extensive bamboo pipelines connected oil wells with salt springs.
