All of these techniques have the goal of solving complex problems and improving quantitative decisions.

What is Operations Research and Why is it Important?

Computer network operations (CNO) is a broad term that has both military and civilian application.Conventional wisdom is that information is power, and more and more of the information necessary to make decisions is digitized and conveyed over an ever-expanding network of computers and other electronic devices.

The British/Europeans refer to "operational research", the Americans to "operations research" - but both are often shortened to just "OR" (which is the term we will use). Another term which is used for this field is "management science" ("MS"). The Americans sometimes combine the terms OR and MS together and say "OR/MS" or "ORMS".
