But the good news, and the proof that IEC 61850 is a living standard, is, that we have many new and young members. Many of these younger members are leading, or are involved in task forces related to new activities around IEC 61850. As you know □ this first column of the year is always an overview on where we are with the standard.

substations. It is a part of the International Electrotechnical Commission's Technical Committee 57 reference architecture for electric power systems. The abstract data models defined in IEC 61850 can be mapped to a number of protocols. Current mappings in the standard are to MMS, GOOSE, SMV, and soon to Web Services. These protocols can run over TCP/IP networks or substation

1 Technical Overview and Benefits of the IEC 61850 Standard for Substation Automation. 1. Abstract-- Legacy substation automation protocols and architectures typically provided basic functionality for power system automation and were designed to accommodate the technical limitations of the networking technology available for implementation.

OpenIEC61850 Overview. At Fraunhofer ISE we are focused on system integration and application development for energy management and control systems which use the IEC 61850 communication protocol. For this purpose we provide a IEC 61850 driver for our OpenMUC framework. The driver is based on the OpenIEC61850 library and is actively maintained according to OpenIEC61850 updates.

Overview. The IEC 61850 Source Code Library from Triangle MicroWorks was designed from the ground up with highly optimized code and advanced protocol parsing techniques. This allows our customers to integrate our code into embedded systems or workstations with low overhead and great performance.

~~IEC 61850 Stack Overview~~

IEC 61850 is a standard for the design of electrical substation automation. It is the base for all developments in substation automation. IEC 61850 is a part of the International Electrotechnical Commission's (IEC) Technical Committee 57 (TC57) reference architecture for electric power systems. IEC 61850 is not just a communications protocol.
