Plumbing Basics. Your home's supply and drainage system must always be two distinct subsystems, with no overlapping. At the fixtures (bridges between the two systems), the air admitted by the vent stack and vent pipes keeps the traps sealed and prevents sewer gases from backing up through the drains.

Plumbing is all about pipes and fittings. Pipes establish the runs that bring or take water, with fittings controlling and manipulating the flow. Pipes are simple enough: they're straight, and come in different sizes. Pick the right material and length, and you're pretty much good to go. Fittings - for a plumber - are much the same.

plumber check your entire plumbing system. 0 If your house is heated by hot water or steam, drain the heating pipes and boiler before leaving. Burners and pilots should be completely out and the main water supply turned off. 0 Drain off the water from the boiler by opening the draw-off valve at the lowest point in the system.

Plumbing is the most complicated aspect of most bathroom and kitchen remodeling projects. To prevent dangerous and unhealthy conditions, plumbing must conform to building codes. The National Uniform Plumbing Code applies generally to the entire country. You must also follow local codes, which could be more stringent.

**Most-Know-Plumbing-Codes-for-a-Successful-Remodel-4-Better-**

Most homes utilize the same basic principles for plumbing and drain systems: A main water line usually comes in around the home's foundation; from this point, it runs over to a water heater. The water heater generates hot water for the entire house.
