**Practical Problems in
Groundwater
Hydrology** This new
publication teaches
hydrogeologic skills
with real world data
and authentic
settings, all in an
innovative multimedia
format. The
centerpiece of this
publication is a CD
that presents 21
problems using text,

thorough analysis of real practical field case studies. It is divided into three parts: * Part I deals with the basic principles, including a summary of mathematical descriptions of groundwater flow, recharge estimation using soil moisture balance techniques,

As groundwater
scientists, we study a
number of issues,
roughly divided into
these categories
(below are excerpts

from Fitts, 2002): 1.

Water Supply. Water supply wells for drinking water, irrigation, and industrial use.

Assemble data on the hydrogeology of the site, e.g., drilling data, well data, and geologic maps.
