By theorem "Concurrency of Angle Bisectors of a Triangle", the three angle bisectors of a triangle intersect at a point that is equidistant from the sides of the triangle. Use the Pythagorean Theorem to find LQ in  $\triangle LQM$ .  $(LQ)^2 + (MQ)^2 = (LM)^2$ . Substitute  $MQ = 15$  and  $LM = 17$ .  $(LQ)^2 + (15)^2 = (17)^2$ . Simplify.  $(LQ)^2 + 225 = 289$

*Angle Bisectors Answers Worksheets - Kiddy Math*

The perpendicular bisector of a side of a triangle is a line perpendicular to the side and passing through its midpoint. The three perpendicular bisectors of the sides of a triangle meet in a single point, called the circumcenter . A point where three or more lines intersect is called a point of concurrency. So, the circumcenter is the point of concurrency of perpendicular bisectors of a triangle.
